ABSTRACT

[Abstract of the Disclosure]

An optical pickup and an optical recording and/or reproducing apparatus using
5 the same are provided. The optical pickup condenses light emitted from a light source
using an objective lens and irradiates the light on an optical recording medium in order
to record data on the optical recording medium and/or reproduce the data recorded on
the optical recording medium. The optical pickup includes an optical element for
adjusting the convergence and/or divergence of light emitted from the light source and
10 then proceeded to the objective lens. Accordingly, since the convergence and/or
divergence of light is adjusted using the separate optical element, an assembling
process of the optical pickup is simple and it is easy to adjust the convergence and/or
divergence of light.
